Application

The Tunnel Type Microwave Goji Berry Dryer Machine is a new type of microwave oven that adopts the tunnel drying technology. This technology has many advantages over other drying methods, such as reduced energy consumption, faster drying time, and better product quality.

The machine features a special design that allows it to dry goji berries quickly and evenly. The goji berries are placed in a tunnel-shaped chamber that is heated by the microwave radiation. The heat causes the water content inside the berries to evaporate, which dries them out.

The machine has several features that make it ideal for use with gojiberries. It has a built-in heating element that ensures uniform temperatures throughout the chamber, which is important for ensuring good product quality. It also has a timer function that allows you to set a specific drying time frame. Lastly, it has an automatic shutoff system that prevents overheating and eventual damage to the machine.
